This section is *optional* and can be used to provide a summary of recommendations to the IT manager regarding which controls and/or compliance best practices Botium Toys needs to implement, based on the risk posed if not implemented in a timely manner.

Recommendations (optional): In this section, provide recommendations, related to controls and/or compliance needs, that your IT manager could communicate to stakeholders to reduce risks to assets and improve Botium Toys' security posture.

There are a number of controls that could be implemented in order to reduce risks. Firstly implementing proper encryption of customer's data would help keep PII/SPII confidential. Additionally, implementing least privilege and separation of duties policies would ensure that employees are accessing only what they need to perform their daily tasks. This would assist in bringing Botium Toys up to compliance with regulations. Additionally, it is recommended to implement a proper IDS to be able to detect potential security incidents. It is heavily recommended that the company documents

proper disaster recovery plans and begin backing up their data to assist in the recovery stage of a security incident. Lastly, I would strongly encourage a strong password management system that strictly enforces stronger password requirements to improve employee authentication and improve productivity in the workplace.
